UNIQUE ANTI-BACTERIAL  
TREATMENT
- **F. JONES SURFACES**  
ARE TREATED FOR STAIN  
RESISTANCE
- **F. JONES SURFACES**  
ARE GUARANTEED  
FOOD FRIENDLY

## GRANITE

### **Congratulations on the purchase of your F. Jones Natural Stone Surface.**

Your Natural Stone Surface has been crafted entirely from documented, first choice materials bringing together exceptional design and manufacturing expertise to create the exquisite blend of form and function that is the hallmark of an F. Jones Natural Stone surface.

We want you to be confident in your purchase and to gain the maximum life from your Natural Stone Surface, so we have compiled these guidelines to assist you.

## CARE FOR YOUR NATURAL STONE SURFACE

**Your Natural Stone Surface has been treated with a unique permanent impregnating sealer. With the correct care, your worktop will retain its beautiful factory finish for many years.**

Impregnating sealers work by repelling liquids rather than blocking the pores of the stone - allowing the material to 'breathe' naturally. The treatment applied to your Natural Stone surface is the best technology available to protect against staining while preserving the look and natural integrity of your work surface.

Stone is natural and unique in colour and veining. This individual character is evident in variations such as distinctive veining, mineral inclusions, minor pitting or areas of enhanced coloration.

## PLEASE BE AWARE

Your worktop is made from an acid sensitive material. It is important to wipe up spills from acidic substances (including citrus juice, vinegar, cola and wine) immediately before acid etching occurs.

### **Avoid the use of abrasive cleaning materials:**

- Scouring powders
- Steel wool,
- Metal brushes, etc

Never use bleach and other chlorine based cleaners, acids, alkalis (caustic soda) and concentrated disinfectants on stone surfaces. If any of these come into contact with the stone, clean them off immediately otherwise surface damage may occur.

### **Spills should be wiped up as soon as possible**

Because the pores of your stone worktop remain open, the surface is not immune to staining but the sealer will give you plenty of time to clean up liquids before they are absorbed into the pores of the stone and stain your worktop.

### **We recommend the use of a trivet for drinks and hot pans**

## CLEANING YOUR NATURAL STONE SURFACE

Rejuvenator is a pH neutral cleaner specially designed for natural stone worktops. Rejuvenator is food safe, provides a mild, natural citrus scent, and contains a tiny amount of invisible sealer to increase protection. If you do not have a specialist cleaning product, warm water and a small amount of dishwashing detergent can be used.
